

The Rauckman Utility Products Tagging Device R-TD is specifically designed for electric utility applications.

Molded from a specially blended elastomer the R-TD remains functional during the most frigid or sweltering weather. In addition to its non-tracking properties the R-TD has a UL-94 flame retardant classification of V-0. Ultra-violet stabilizers ensure that the R-TD lasts for many years of service.

Cavity with tapered internal ribs to accept the head of a disconnect (switch) stick.

Double Hooks for easy landing. Each hook has a steel core that provides memory for "field shaping".

Molded eye to allow attachment of hold cards with straps, cords or lanyards.

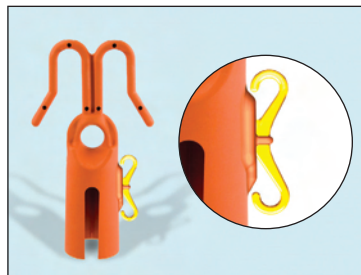

Slot to allow the prong of a disconnect (switch) stick to aid in installation and removal.

R-TD installed on a disconnect switch

Catalog No.	Description	Color	Weight oz. (g)
