One-Piece Switching & Disconnect Hotsticks

Switching and Disconnect Hotsticks are used to operate a wide variety of overhead and underground apparatus including cutouts and switches. These tools are some of the most fundamental hotsticks with the design dating back to the early 1900's when these live-line tools were made of wood.

Switching and Disconnect Hotsticks are offered in two diameters; 1¼" and 1½". The 1¼" model has two different head styles available; "Switch Stick" style and "Disconnect" style. The Switch Stick style has a notch specifically designed to fit the trunnion of a cutout fuse tube to aid in engagement when replacing a fuse tube.

The insulating portion of these tools meet ASTM F-711 and are constructed of electrical grade fiberglass reinforced thermoset resins that surround a uni-cell foam core.
