

The Pole Tong is designed to grab and handle, rotate or guide wood poles.

Pole Tong is constructed of 1½" diameter ASTM F711 hotstick handles and lightweight yet heavy-duty aluminum alloy. The tong's engagement teeth are made of high-carbon steel and are easily removable for sharpening or replacement.

The pole tong has multiple hinge positions for adjusting the jaw opening. It can handle wood poles from 7" to 20" in diameter.

Sharp High-Carbon Steel
Teeth for Secure Attachment

Adjustable Hinge Positions for Secure Handling
